## ARKANSAS

JANUARY 1951
Volume LVI No. 1

KANSAS CITY: 1951

## ARKANSAS - JANUARY, 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather over Arkansas during January 1951 was generally favorable for outdoor work and the growth of winter crops.

The monthly mean temperature for the state was 41.5°, which is 0.3° above the normal. The highest monthly mean temperature was 49.9° at Okay and the lowest was 35.1° at Gravette. The highest temperature recorded during the month was 80° five miles north of Magnolia on the 18th and at Okay on the 28th. The lowest temperature recorded was -2° at White Rock on the 31st. There was an average of 19 days with temperatures of 32° or lower. Three stations, Gravette, Lutherville and White Rock, reported temperatures of zero or below, all of which occurred during the closing days of the month. Temperatures averaged near normal until the closing days of the month when a cold wave brought unseasonably cold weather to the state.

The average monthly precipitation over the State was 5.43 inches, which is 0.99 inch above the normal. The greatest monthly total was 12.96 inches at Marvell, and the least, 1.08 inches at Harrison. There was an average of nine days upon which 0.01 inch or more of precipitation was recorded. The greatest amount of precipitation recorded in 24 hours was 3.70 inches at Sheridan on the 13th. The average snowfall for the month was 2.4 inches. The greatest monthly snowfall was 7.5 inches at Dumas. Six stations reported no snow during the month.

Precipitation was well distributed during the first half of the month. Light to moderate precipitation was general on the first and second and moderate to heavy precipitation was general on the 11th, 12th and 13th. These later rains caused minor flooding on the White, Black, Little Red, Little Missouri and Ouachita Rivers.

A period of dry weather with only scattered precipitation from the 15th through the 26th was very favorable for such work as plowing and the preparation of ground for spring plowing. This period was also favorable for the growth of winter crops.

General light to moderate rains began again on the 27th and continued through the month. Some locally heavy amounts occurred over the southern part of the state. These rains revived pastures that had become quite dry during the previous weeks.

A general sleet and glaze storm began on the afternoon of the 28th and continued intermittently through the 31st. Highway traffic was disrupted over much of the state and many schools were closed because of impassable roads.

### STORMS

There were no severe storms during the month.

### FLOODS

The Black River was above flood stage at Black Rock from the 15th through the 19th, cresting at 17.8 feet at 6:00 P.M. of the 15th.

The White River was above flood stage at Clarendon from the 22nd through the 27th, cresting at 26.2 feet at 7:00 A.M. of the 24th, and at Saint Charles from the 26th through the 31st, cresting at 25.1 feet at 7:00 A.M. of the 29th.

The Ouachita River was above flood stage at Arkadelphia from the 14th through the 17th, cresting at 21.3 feet at 8:00 A.M. of the 15th and at Camden from the 16th through the 24th, cresting at 34.3 feet at 7:00 A.M. of the 20th.

The Little Missouri River went above flood stage at Boughton on the 16th, reaching a crest of 20.5 feet at 7:00 A.M.

The Little Red River went above flood stage at Judsonia on the 16th, reaching a crest of 32.1 feet at 6:00 A.M.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| 6 | Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

FEBRUARY 1951
Volume LVI No. 2

KANSAS CITY: 1951

## ARKANSAS - FEBRUARY, 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

A severe cold wave the opening days of the month gave Arkansas near-record low temperatures. Minimum temperatures recorded in many sections were the lowest in February since 1905, and the lowest during any month since January of 1930. Despite unusually low temperatures during the first week, the month's mean temperature was above normal. Precipitation was well distributed throughout the month.

The monthly mean temperature for the State was 44.3°, which is 0.6° above the normal. The highest monthly mean was 50.2° at Magnolia. The lowest monthly mean was 36.8° at Green Mountain. The highest temperature recorded during the month was 82° at Okay on the 12th. The lowest temperature recorded was 24° below zero at Mammoth Spring on the 2nd. This was the lowest temperature recorded in the State since Lead Hill had 28° below zero on January 22, 1930; and the lowest February temperature since Gravett had the State's record low temperature of -29° on February 13, 1905. There were only six stations in the State that did not report minimum temperatures of zero or below on the morning of the 2nd. There was an average of 13 days during the month on which temperatures of 32° or lower were recorded.

The average monthly precipitation for the State was 5.32 inches, which is 1.73 inches above the normal. The greatest monthly total was 11.59 inches at White Rock, and the least, 1.23 inches at Fountain Hill. The greatest amount recorded in 24 hours was 4.30 inches at Blakely Mountain Dam on the 20th. The average monthly snowfall over the State was 2.5 inches. This amount includes the fall of snow, sleet and hail. The greatest monthly total was 9.9 inches at Rogers. Only 12 stations reported no snowfall during the month. There was an average of 9 days on which 0.01 inch or more was recorded.

The severe cold wave on the 2nd severely damaged fruit trees and shrubs. It is the consensus that as a result of the general sub-zero temperatures during the opening days of the month, the prospects for the peach crop are the poorest since 1943. In many sections of the State, rose and gardenia bushes and other flowering shrubs were killed.

A general glaze and sleet storm the closing days of the preceding January and the first day of February, rendered many roads and highways impassable to the extent that traffic was brought to a complete standstill. In many sections rural and city schools were closed for from a few days to a week. Electric power distribution was disrupted in several localities. The snow cover was, however, favorable for winter grains during the period of extremely low temperatures. Much of the northern portion of the State was covered by a general glaze and sleet storm which began on the evening of the 13th, and continued intermittently through the 15th. Highway traffic was disrupted over much of the area for up to a week, and many rural schools were closed. Telephone and electric services were disrupted in many localities. There is no accurate estimate of the monetary loss from this source. There was also considerable damage to timber, with losses estimated to have been in excess of $10,000.

A period of general moderate to heavy rains between the 14th and the 20th caused floods on the White, Black and Ouachita Rivers, and high stages on the Arkansas River.

Excessive soil moisture seriously delayed spring plowing. In many sections plowing did not get underway until near the close of the month. Where soil conditions permitted, the sowing of lespedeza began during the third week. Some potatoes and garden vegetables were planted during the closing week.

Generally, winter crops made slow progress during the first part of the month. Vegetation, generally, made rapid growth during the latter half. Strawberry prospects continued good throughout the month, and by the close were considered to be excellent. Some peach blossoms were reported during the closing days of the month.

### STORMS

At 9:15 a.m. on the 20th, a tornado struck in the vicinity of Keo in Lonoke County, and progressed in a northeasterly direction to beyond Marked Tree in Poinsett County, where it dissipated. The path of the storm was two miles wide and 115 miles in length. Several homes and farm buildings were either destroyed or damaged. In the town of Brinkley the winds toppled a wall in a burned-out building, which crashed through the roof of an adjoining store, severely injuring one person. Property damage is estimated at $32,500. Crop loss was negligible.

### FLOODS

Moderate to heavy precipitation was general over the Arkansas, White, Black and Ouachita River Basins on February 13, 14 and 15, 1951. Storm totals averaged near 2.00 inches over most areas. These rains were followed by moderate to heavy rains, beginning on the 17th and continuing through the 20th. Combined storm totals for the two periods averaged near 4.00 inches. As a result of these rains sharp rises occurred on all streams in the Little Rock District.

The Ouachita River was above flood stage at Arkadelphia from the 16th to the 18th, cresting at 19.9 feet at 4:00 p.m. of the 16th; and from the 21st to the 23rd, cresting at 21.6 feet at midnight of the 21-22nd; and at Camden from the 18th through the close of the month, cresting at 33.4 feet at 7:00 a.m. of the 26th. A total of 5,000 acres was inundated in the vicinity of Arkadelphia. Damage was estimated at $2,000, of which $1,000 was to highways.

The Black River was above flood stage at Poplar Bluff, Missouri, on February 22nd, cresting at 16.8 feet at 4:00 p.m. on that day, and at Black Rock from the 19th through the close of the month, cresting at 23.1 feet at 7:00 a.m. of the 22nd. This flooding caused no appreciable damage at Poplar Bluff, but damage in the vicinity of Black Rock is estimated at $54,000.

Flooding on the White River began at Calico Rock on the 21st, and at all points except the extreme lower reaches by the 24th. The river remained above flood stage from Newport to its mouth throughout the remainder of the month. Flood damage along the White River and tributaries was negligible except in the area between Newport and Georgetown, Arkansas, where it was estimated at $32,000.

There were sharp rises on the Arkansas River, but no flooding occurred. At Dardalelle the crest was 21.2 feet at 7:00 a.m. of the 22nd, which is within 0.8 foot of flood stage. No damage from high water was reported.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| 6 | Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

## ARKANSAS

MARCH 1951
Volume LVI No. 3

KANSAS CITY: 1951

## ARKANSAS - MARCH, 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Cool dry weather prevailed over Arkansas during March 1951.

The monthly mean temperature for the State was 51.3°, which is 1.1° below the normal. The highest monthly mean temperature was 57.7° at Crossett and Magnolia. The lowest monthly mean temperature was 41.9° at Green Mountain. The highest temperature recorded was 87° at Perryville on the 6th, and at Magnolia on the 8th. The lowest temperature recorded was 11° at Harrison on the 13th. There was an average of 8 days during the month on which temperatures fell to 32° or below. At the Batesville Livestock Experiment Station temperatures of 32° or below were recorded on 21 days.

The average monthly total precipitation for the State was 2.40 inches, which is 2.36 inches below the normal, making this the driest March since 1941. The greatest monthly total was 7.21 inches at Crossett, and the least, 0.67 inch, at Black Rock. The greatest daily amount recorded was 3.77 inches at Mena on the 10th. The monthly average snowfall for the State was 0.2 inch. The greatest monthly snowfall was 2.0 inches at Helena. There was an average of 8 days with 0.01 inch or more of precipitation.

Precipitation during the first week was mostly light and scattered. There was a period of light to moderate precipitation beginning on the 8th and continuing through the 18th. There were some locally heavy rains during this period. There was a second period of general rains on the 26th, 27th, and 28th. Snow was quite general over the northern portion of the State on the 11th and 12th.

The weather of the first 10 days of the month was favorable for crops and farm work. During this period vegetation advanced rapidly; cherries, plums and peaches bloomed. Good progress was made with gardens, sowing of oats and clover, and planting potatoes.

The weather during the second 10 days was less favorable. Cold wet weather retarded vegetation and interfered with farm work in most sections. There was considerable apprehension that the already reduced peach crop was further damaged. Actual damage, however, was less than had been feared.

The closing third of the month was favorable for all farm activities. Rapid progress was made with plowing and planting. The prospects for the strawberry crop appeared to be excellent. Pastures and meadows greened, thus benefitting livestock.

### STORMS

During the afternoon and early evening of the 17th, a series of storms was reported from Texarkana in the southwest portion of the State to Batesville in the northeast portion. Principal damage was: in El Dorado, the high school and an automobile were seriously damaged when struck by lightning; in Clarksville, between 200 and 300 homes were damaged by hail, stones up to 9 inches in circumference were reported, and one man was injured when struck by flying tin from a roof; in Batesville, two houses were unroofed, and 2500 chickens scattered when a brooder house was destroyed.

At 7:00 a.m. on the 28th lightning did an estimated $1,000,000 damage when it struck the main switchboard in the power plant of the Crossett Paper Mills in Crossett.

### FLOODS

The floods on the streams in the State during March 1951 were the result of continued high stages from the flood of the preceding February, except for secondary crests on the Black River at Black Rock on the 19th, and on the White River at Augusta on the 18th.

Damage from continued high water was negligible aside from the resultant delay in the preparation of the ground on lowlands adjacent to the streams for spring planting.--JRF

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.B.O., Kansas City, Mo. -- 5-28-51 -- 1125

## ARKANSAS - APRIL 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

April 1951 over Arkansas was cool and relatively dry.

This was the coolest April since 1928, and together with 1901, the fourth coolest on the State's 61 year record. The monthly mean temperature for the State was 58.1°, which is 3.5° below the normal. The highest monthly mean temperature for the State was 58.1°, which is 3.5° below the normal. The highest monthly mean temperature was 62.8° at Magnolia, and the lowest, 51.1° at Green Mountain. The highest temperature recorded was 90° at Paris on the 27th and at Camden on the 28th. The lowest temperature recorded was 21° at Harrison on the 17th. There was an average of 3 days, over the State, on which the temperature fell to 32° or lower. Frosts were general over the northern half of the State on the 14th and 17th, with freezing temperatures reported from most stations in the northwestern portion on the morning of the 17th. Freezing temperatures were reported over the extreme northern portion of the State on the morning of the 23rd. There was local frost over much of the northern portion on the same morning.

The monthly average precipitation over the State was 4.33 inches, which is 0.61 inch below the normal. The greatest monthly total was 8.32 inches at Prescott and the least, 1.80 inches at Cummins Farm. The greatest amount of precipitation recorded in 24 hours was 3.72 inches at the Prescott Soil Conservation Service Station on the 6th. The only measurable snowfall reported was 1.5 inches at Lurton and 1.0 inch at Buffalo Tower. Twenty-nine stations reported snowfall too light to measure. There was an average of 9 days upon which 0.01 inch or more of precipitation occurred.

Field work was generally behind schedule at the beginning of the month due to muddy ground from general rains during the closing days of March. Rains during the first half of April caused further delay in most sections of the State. By the close of the second week, very little cotton had been planted, but the preparation of seed beds was progressing as rapidly as soil conditions would permit. The planting of rice was also delayed.

Cool wet weather during the first half of the month was also unfavorable for those crops that had been planted earlier in the season. Pastures made poor growth during the period. Small grains that had been top-dressed with nitrogen continued in good condition, but other fields made poor progress. Strawberries suffered little from the cold, except that the harvest was delayed.

There was a marked improvement in weather during the third week. Good to excellent progress was made in the preparation of seedbeds and planting. The bulk of the cotton land was prepared and a considerable amount of the crop was planted during the week. Some rice was also planted. Small grains showed some improvement. Frosts during the week damaged some new seedings of lespedeza and other crops, but damage was not excessive. The frosts again set the strawberry crop back. Pastures grew fast and were furnishing good grazing by the close of the week.

Rains during the last week of the month further delayed field work and planting. Cotton was being planted considerably later than during the previous year. At the close of the month approximately one-third of the crop had been planted. Actual amounts planted ranged from 10% in the east-central and south-central counties to 80% in Chicot County. The seeding of rice progressed slowly due to wet fields in many localities. Small grains grew rapidly during the week. At the close of the month crimson clover was blooming in all sections, and pastures showed a marked improvement. The strawberry harvest began during the week in the Horatio-DeQueen area.

At the close of the month, the amount of corn planted ranged from very little to about 90%, with wide local variance. Much of that planted was coming up to good stands, but some fields were in need of replanting.

### STORMS

During the late afternoon and early evening of April 6th a series of hail and wind storms occurred in a narrow belt from Russellville in Pope County, southeastward into Lonoke County. Principal damage was near Conway in Faulkner County, where hail did extensive damage to roofs, windows, and automobiles, together with serious damage to strawberries and truck crops. Stones the size of golf balls were reported to have fallen in Beebe for a period of 32 minutes. Property damage was estimated at $250,500, and damage to crops at $100,000.

On the evening of the 18th a hail and wind storm caused extensive damage to the peach crop in the Center Point area of Howard County. During the same evening, wind destroyed a hangar, together with a Taylorcraft plane and a crop duster, on the C. E. Murray farm near Nashville. An estimate of the monetary loss is not available.

At 2:00 p.m. on the 21st a hailstorm covered a path 200 yards wide and 14 miles long, from a point 4 miles west, to a point 10 miles northeast of Blytheville. There was no damage to crops, but damage to buildings and automobiles is estimated at $20,000.

### FLOODS

Floods on the rivers in Arkansas during April 1951 were the results of secondary rises and continued high water from the previous month. The only appreciable flood damage was from the continued loss of the use of the inundated land for agricultural purposes.--JFR

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are availabie for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# CLIMATOLOGICAL DATA

## ARKANSAS

MAY 1951
Volume LVI No. 5

KANSAS CITY: 1951

## ARKANSAS - MAY 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This was the driest May over Arkansas since 1925, and the third driest on the State's 61 year record. The total precipitation for the State was 1.93 inches, which is 3.18 inches below the normal. Below-normal totals were reported by all stations in the State. Totals at individual stations ranged from 0.12 inch at Monticello, to 4.31 inches at Gilbert. The greatest daily amount recorded was 1.72 inches at Gilbert on the 2nd. There was an average of 5 days during the month on which 0.01 inch or more of rain occurred.

Precipitation was quite general on the 1st, 2nd, 6th, 10th, 22nd and 23rd. Amounts on these dates were generally light to moderate, with some stations reporting amounts in excess of an inch.

The monthly mean temperature for the State was 69.1°, which is exactly normal. The highest monthly mean temperature was 72.8° at Pine Bluff, and the lowest, 63.7° at Harrison. The highest temperature recorded was 101° at Dumas No. 1 and Subiaco on the 31st. This was the highest temperature recorded in the State during any May since 1934. The lowest temperature recorded was 33° at the Batesville Livestock Experiment Station on the 12th. There was an average of five days on which temperatures rose to 90° or higher.

Rains during the first ten days of the month further delayed field work that was already considerably behind schedule because of wet ground from rains during the preceding months. By the close of the period, however, most ground had been prepared and about 55% of the cotton crop had been planted. The planting of rice and soybeans, like cotton, was delayed by wet weather. The planting of early corn was delayed, but to a lesser extent. In contrast to other crops, small grains, hay and pastures made good to excellent progress during the period.

After the first 10 days of the month precipitation was limited to widely scattered showers, except for fairly general showers on the 22nd and 23rd. By the 15th it had begun to get a little dry in the north-central and northeastern counties. By the 20th surface soil was very dry in all but a few localities in the southwestern portion. While dry weather permitted rapid completion of field work and planting, there was a general lack of sufficient moisture for the germination of cotton, corn and soybeans. While the showers on the 22nd and 23rd helped in some localities, the general lack of moisture became more critical as the month progressed.

By the close of the month cotton planting was 100% complete in some counties, and nearing completion in others. Most early fields were up to good stands, but in serious need of moisture. A considerable acreage of late cotton and fields that had been replanted failed to germinate.

The seeding of rice was nearing completion as the month closed. The flooding of late plantings aided germination. Corn fared well, and much of the crop had been cultivated twice by the close of the month. Dry weather, however, slowed down its growth in upland fields. Early plantings of soybeans generally suffered from a lack of moisture during the latter half of the month. The planting of the later crop had not been completed by the close of the month.

Hay crops generally did well, with the first cuttings of alfalfa being reported during the third week. The oats crop suffered from lack of rain. Cutting oats for hay was beginning in southern counties at the close of the month.

At the beginning of the month strawberries were moving to market in volume from White County and the west central counties. The harvest continued throughout the month and had progressed to Searcy County and the northwestern counties by the close. Hot dry winds materially reduced the size of the berries and lowered the quality in all sections where the harvest continued past the middle of the month.

### STORMS

At 3:30 p.m. of the 22nd a hail and wind storm originated about two miles to the west of McRae in White County, and moved eastward over the town. The path of the storm was 1 1/2 miles in width and about six miles in length. There was extensive damage to roofs, windows, gardens and crops. Many chickens were killed. Young crops in the fields and the remainder of the strawberry crop were destroyed. While crop damage was extensive, no estimate of the monetary loss is available. Damage to property exclusive of crops was estimated at $35,000.

At 10:00 p.m. of the 22nd a hail and wind storm struck Augusta in Woodruff County. The storm progressed from west-southwest to east-northeast, in a path 100 yards wide, striking the west edge of the town. There was some damage to roofs, windows, automobiles. A number of power lines were broken. There was considerable damage to gardens and some cotton was hit. An estimate of the monetary loss to crops is not available. Other losses were estimated at $1,000.

### FLOODS

The only flooding in Arkansas during May 1951 was on the White River at Clarendon and below. This flooding was due to secondary crests on continued high water from previous months. Damage from this flooding was negligible.--JFR

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

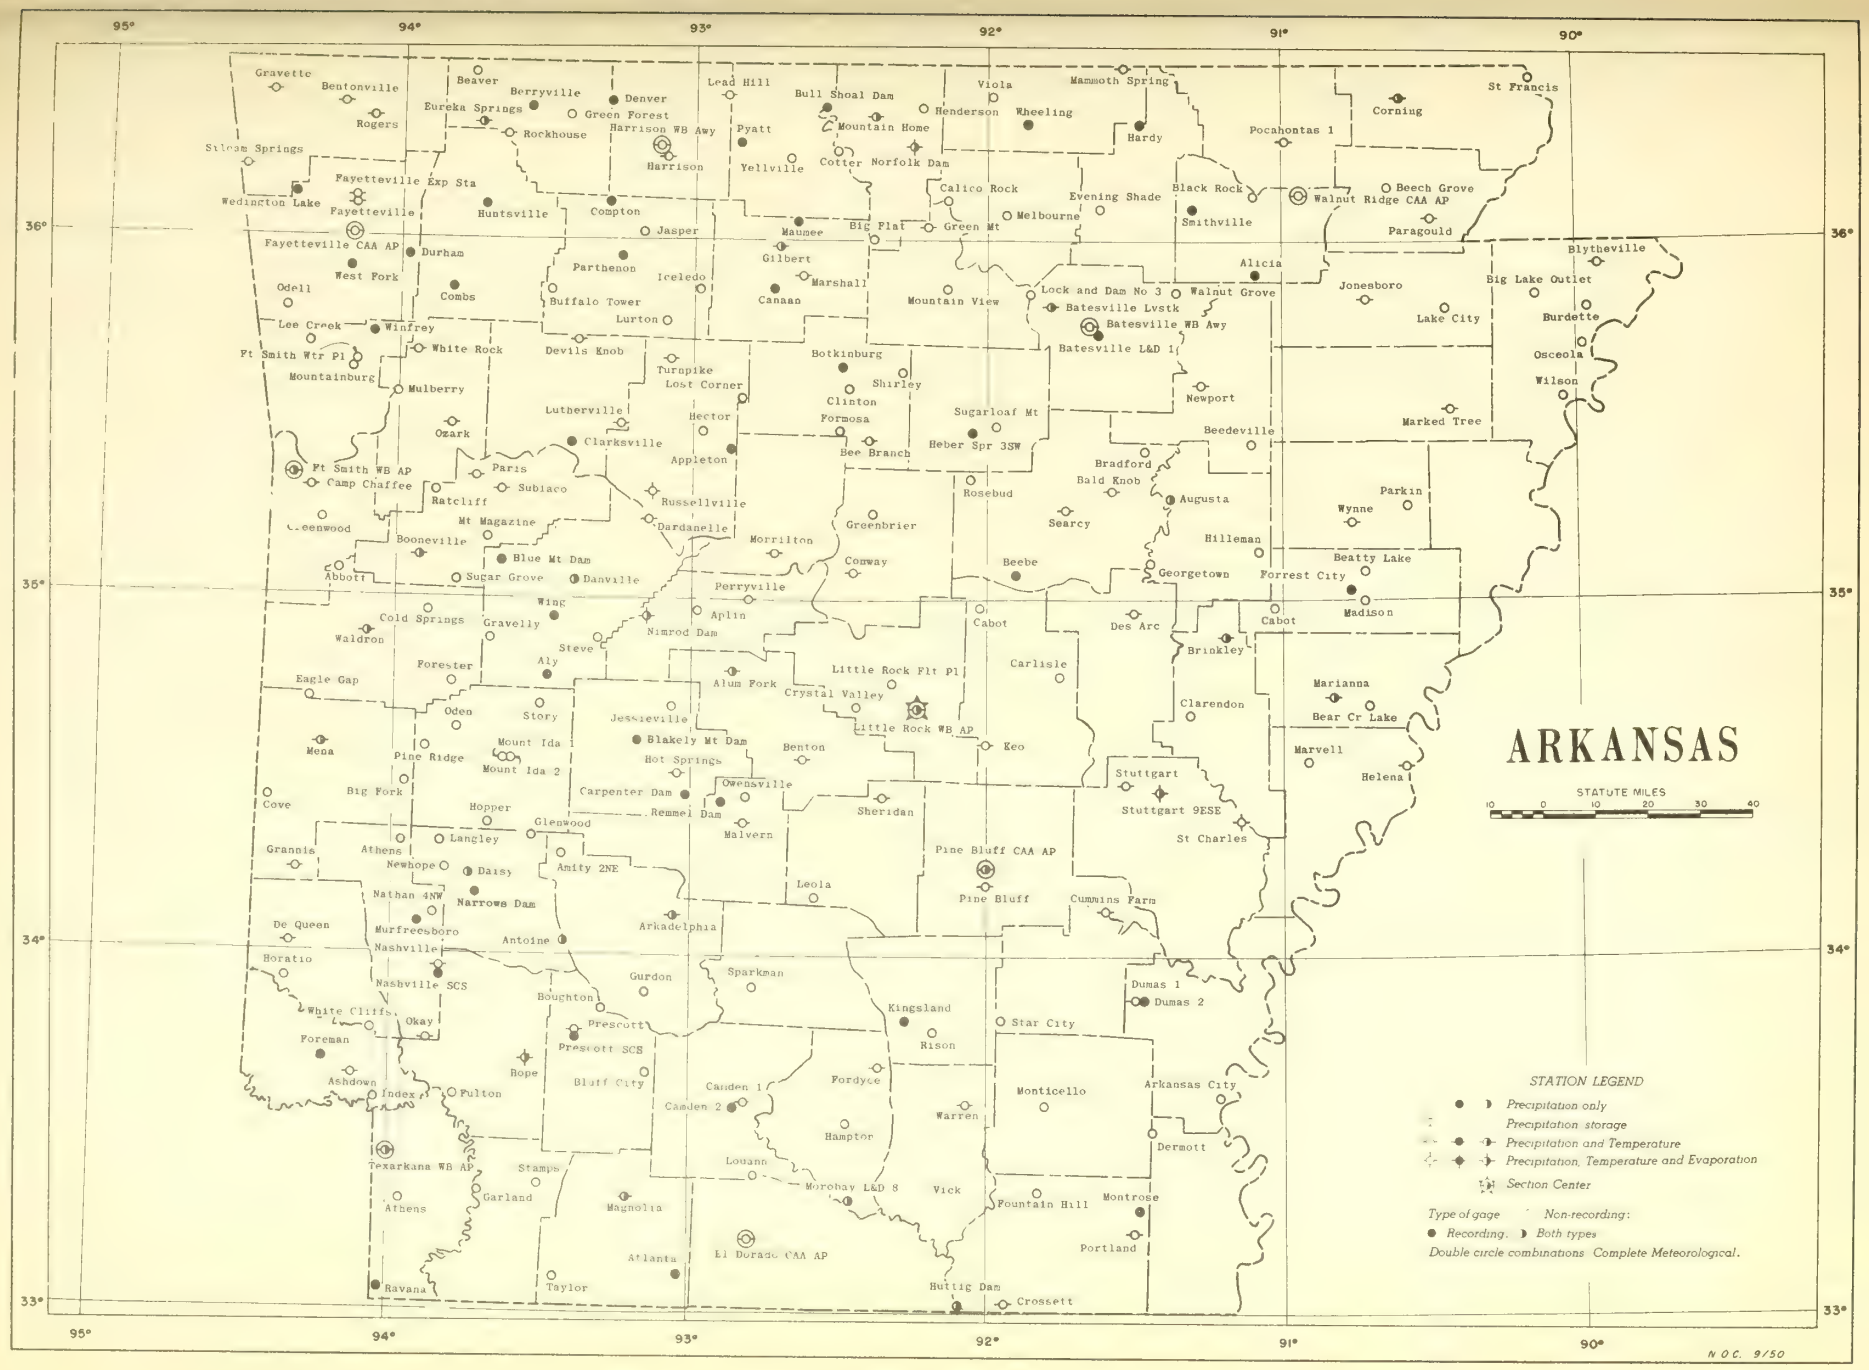
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| 6 | Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

KANSAS CITY: 1951

## ARKANSAS - JUNE 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather over Arkansas during the month of June 1951 was showery and rather cool. On the whole, the month was favorable for agriculture.

The monthly mean temperature for the State was 75.9°, which is 1.2° below the normal, making it the coolest June since 1946. The highest monthly mean temperature was 79.7° at Dumas #1, and the lowest, 69.9° at Turnpike. The highest temperature recorded was 103° at Blytheville on the 1st, and the lowest, 49° at Harrison on the 4th and at Gravette on the 6th. There was an average of 12 days on which the temperature reached 90° or higher. Crossett had 22 days with temperatures of 90° or higher. There were 5 stations at which the temperature did not reach 90° during the month.

The average monthly precipitation for the State was 6.93 inches, which is 2.82 inches above the normal. The greatest monthly total was 14.27 inches at Rogers, and the least, 2.12 inches at Marvell. The greatest daily amount of precipitation reported was 4.29 inches at Crossett on the 12th. There was an average of 13 days with 0.01 inch or more of precipitation. Nine stations reported a trace of hail during the month.

Near record high temperatures were recorded in nearly all sections of the State on the opening day. In contrast, near record low temperatures were recorded in many sections on the morning of the 4th.

Rains beginning early in the month alleviated a quite serious drought situation continuing from May. Moisture from these rains promoted the germination of cotton, corn, rice, soybeans and sorghums that had been planted during May. The rains also helped early cotton and corn.

Frequent showers continued until the closing week. These showers caused a considerable delay in the accomplishment of all types of field work. As a result, many fields became quite rank. Open weather during the closing week of the month dried most fields sufficiently to permit a resumption of work.

Cotton grew well during the month, but as a result of frequent showers, many fields became grassy. This was especially true of late plantings. By the middle of the month squares were forming on early cotton, and blooms were appearing in a few fields in southern counties. By the close of the month early cotton was fruiting rapidly, with many blooms. While weevils and other insects were reported from all sections, infestation did not assume serious proportions. Poisoning was on a limited scale.

Rice made a rapid recovery from the adverse effects of the dry weather of the previous May, and made excellent progress throughout the month of June. Some fields were drained during the last two weeks of the month.

Corn made good progress during the month despite delays in the planting of late fields, due to wet ground. By the close of the month early corn was tasseling and silking in most sections, and some fields were in the roasting ear stage. Yield prospects for early corn were excellent.

The planting of soybeans continued throughout the month. The crop generally made satisfactory progress, although late planted fields became grassy and were badly in need of cultivation at the close of the month. The harvest of small grains generally began during the last two weeks of the month. At the close, the oat harvest was virtually completed in the southern portion of the State. Hay made good progress, but there was some damage from moisture during harvest.

Truck crops and gardens made normal progress except that wet weather tended to slow the harvest of most vegetables. Excessive moisture also lowered the quality of tomatoes.

The harvest of early peaches began during the second week. The prospects for later varieties improved during the month.

Pastures were excellent throughout the month. As a result, cattle fared very well, with good gains reported from all sections.

### SEVERE STORMS

On the morning of June 7, 1951, a wind, rain and hail storm moving in a path about one mile wide crossed Lonoke and Arkansas Counties. There was extensive damage to trees, telephone and power lines, and roofs. In Stuttgart 75% of the television antennas were destroyed. Property damage was estimated at $5,500. Loss of crops was estimated at $2,000, which was mostly from water on grains in storage.

At 1:00 a.m. a wind and electrical storm struck Clarksville in Johnson County. The storm moved from west to east over a path 5 miles wide and 20 miles long. There was extensive damage to peaches, small grains and corn. Several head of livestock were killed by lightning. Several farm buildings were either destroyed or damaged. Telephone and power lines were blown down. Property damage was estimated at $150,000, and damage to crops at $51,000.

At 4:00 a.m. of the 8th a wind and hail storm struck Arkansas County. The storm moved from northwest to southeast, doing considerable damage to telephone and power lines in rural areas and in Stuttgart. No estimate of the monetary loss is available. There was some hail, but damage was negligible.

At 1:00 a.m. of the 9th a wind, hail and electrical storm struck Lonoke and Arkansas Counties. The storm moved from northwest to southeast, doing extensive damage to telephone and power lines. Telephone equipment suffered extensive damage when lightning struck cables at Jacksonville. Hail damage was light. An estimate of monetary loss is not available.

### FLOODS

There were no floods in Arkansas during June 1951.--JFR

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

See reference notes following Station Index.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| 6 | Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## CORRECTIONS

**January 1951**, Batesville Livestock, Table 7, 31st should be T on ground.

Batesville Livestock, Table 2, greatest depth is T on 30+.

Beedeville, Table 7, 30th is 2 on ground and 31st is 2 on ground.

Beedeville, Table 2, greatest depth should be 2.

Jonesboro, Table 2, greatest depth of snow on ground is T on 7+.

**February 1951**, Bear Creek Lake, Table 3, delete dashes on 26th, 27th, and 28th; add .28 on 27th and total 2.53.

Bear Creek Lake, Table 4, delete dashes on 26th and 28th and add on 27th: 2a .08, 3a .05, 4a .09, 5a .01, 6a .05.

Combs, Table 3, add .07 on 28th and change total to 9.03.

Combs, Table 4, add on 28th: 1a .04, 10a .01, noon .02, and total .07.

Denver, Table 3, add .18 on 28th and change total to 5.93.

Denver, Table 4, add on 28th: 1p .17, 2p .01, and total .18.

Hardy, Table 3, add .09 on 27th, .03 on 28th, and change total to 5.67.

Hardy, Table 4, add on 27th: 10p .01, 11p .04, midnight .04, total .09. Add on 28th: 2a .01, 4p .02, and total .03.

Heber Springs, Table 3, delete dashes on 23rd through 27th and add .13 on 26th and 5.74 total.

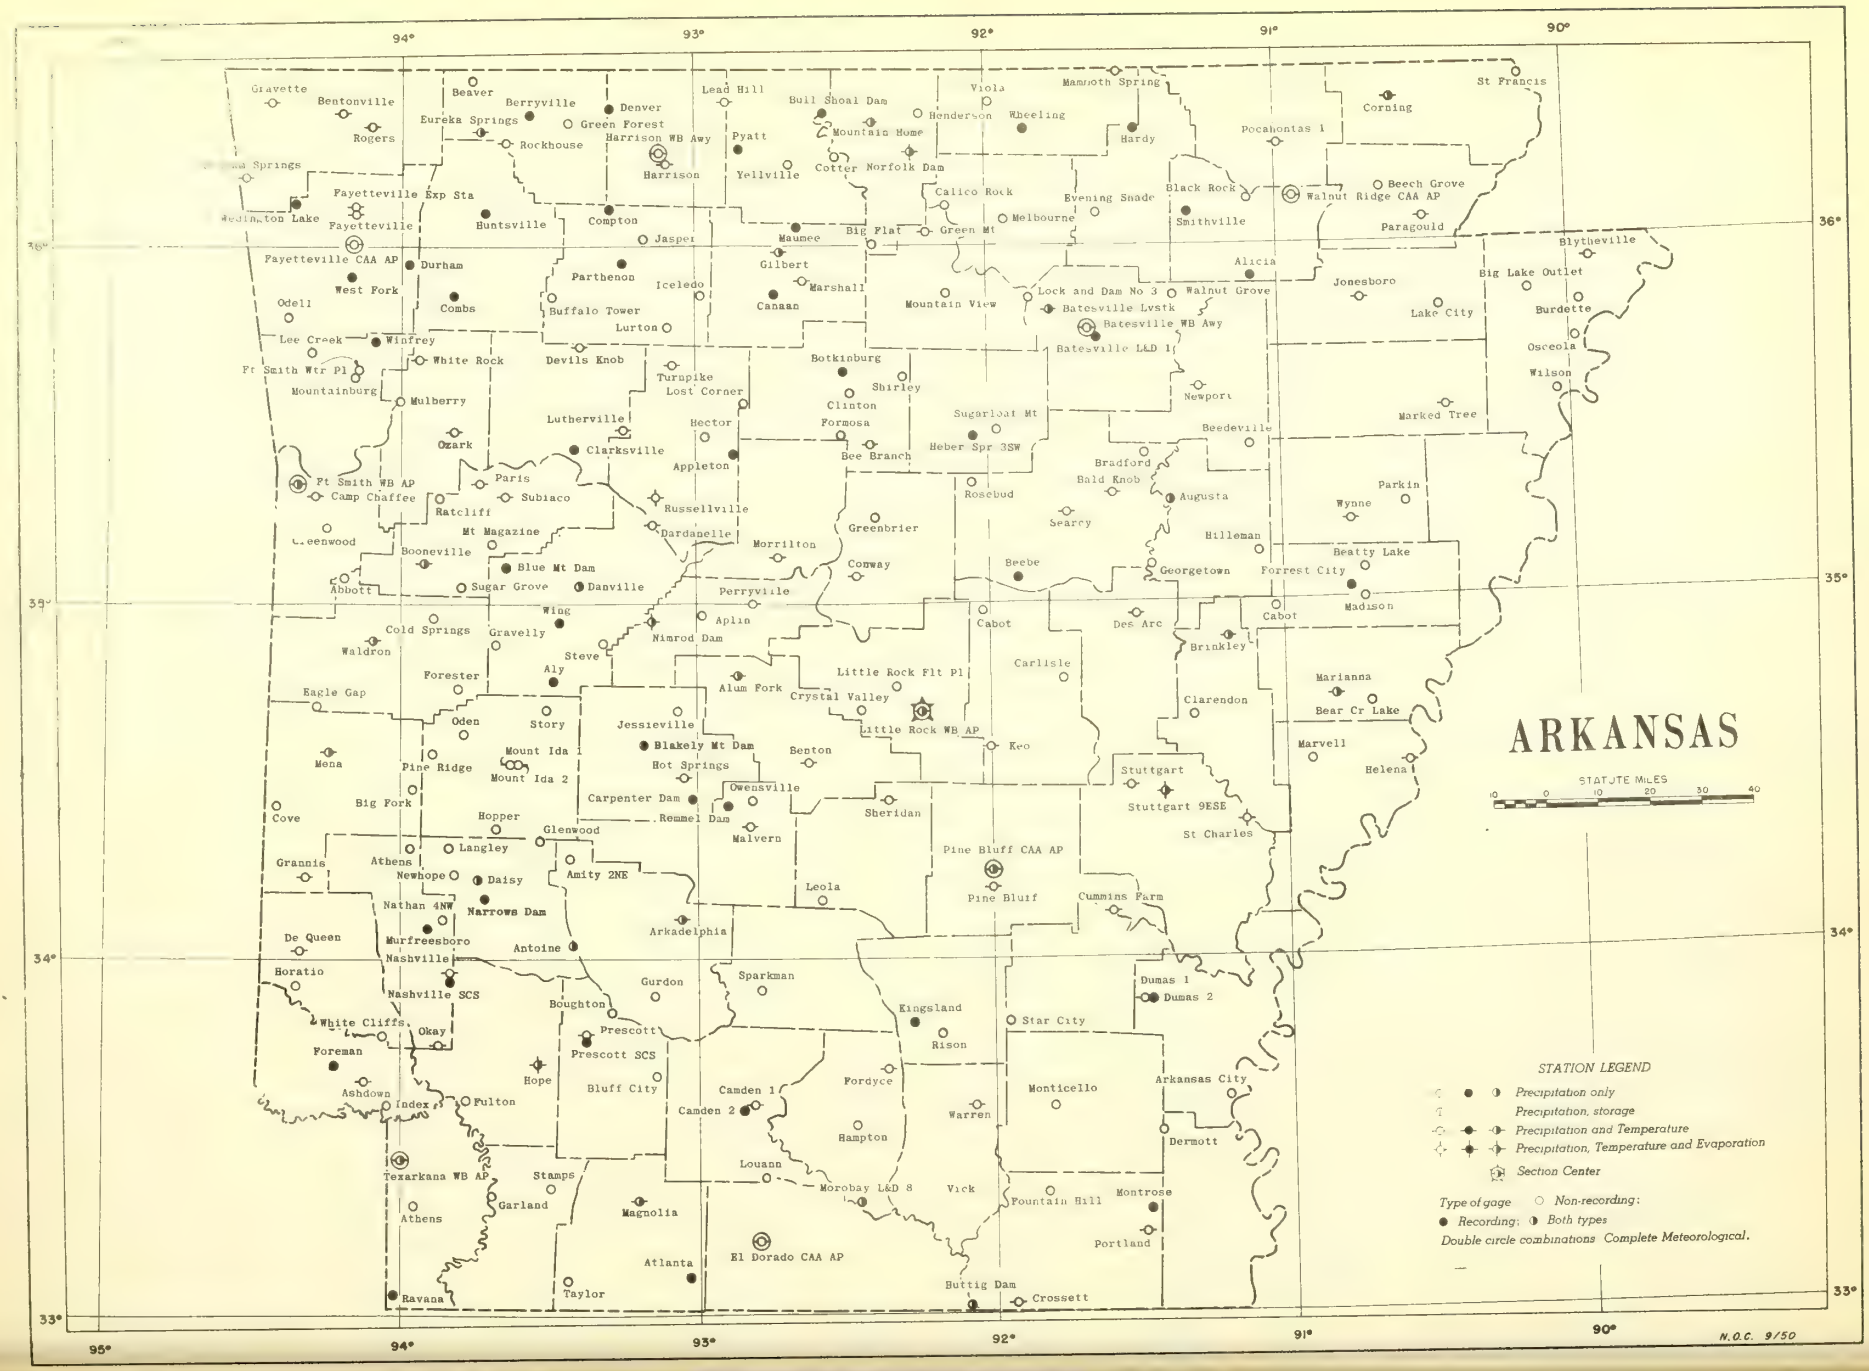
Heber Springs, Table 4, delete dashes on 23rd and 27th and add on 26th: 3a .03, 5a .02, 6a .01, 7a .01, 8a .02, 9a .02, 10a .01, noon .01, total .13.

Maumee, Table 3, add .07 on 27th and change total to 5.85.

Maumee, Table 4, add on 27th: 10p .06, 11p .01, total .07.

Ravana, Table 3, add .10 on 27th.

Ravana, Table 4, add on 27th· 5a .05, 6a .02, 7a .03, total .10.



Aly, Table 3, add .10 on 28th and change total to 5.23.

Aly, Table 4, add on 28th: 2p .05, 3p .04, 5p .01, total .10.

**March 1951**, Fordyce, Table 2, precipitation departure should be -3.01.

**May 1951**, Newport, Table 2, total snowfall should be 0.

## ARKANSAS

JULY 1951
Volume LVI No. 7

KANSAS CITY: 1951

## ARKANSAS - JULY 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather over Arkansas during the month of July 1951 was generally favorable for agriculture. Precipitation was mostly in the form of showers and well distributed throughout the month. Temperatures were normal.

The monthly mean temperature for the State was 80.5° which is exactly normal. The highest monthly mean temperature was 83.4° at Helena and the lowest, 75.3° at Turnpike. The highest temperature recorded was 104° at Monticello on the 10th, and the lowest 51° at Harrison on the 1st, and at the Batesville Livestock Experiment Station on the 2nd. There was an average of 23 days on which temperatures of 90° or higher were recorded.

The average monthly precipitation for the State was 5.83 inches, which is 2.09 inches above the normal. The greatest monthly total was 11.76 inches at Newhope and the least 0.74 inches at Berryville. The greatest amount that occurred on any one day was 7.18 inches at Okay on the 1st. There was an average of 8 days with 0.01 inch or more of precipitation. There were only two days, the 7th and the 21st, on which measurable precipitation was not recorded at some point in the State.

Precipitation was general on the 1st, 2nd, and 3rd with several points receiving locally heavy to excessive amounts. Heavy rains delayed much needed field work in most sections of the State. Many fields were rank with weeds and grass. In some low spots crops were in danger of drowning out. These rains caused flooding on the Ouachita, White and Black Rivers.

There were frequent showers and thunderstorms during the remainder of the month, but there was sufficient open weather to permit field work and good crop growth. Soil moisture remained adequate throughout the month.

The month's weather was generally favorable for cotton. The early crop made good progress in all sections. At the beginning of the month early cotton was fruiting rapidly and many blooms were appearing. Late cotton, however, did not fare so well. As a result of excessive moisture during the preceding June and the opening days of July many fields became rank with weeds and grass. Frequent showers during the month further hindered field work. As a result some early fields were abandoned, and the growth of the crop generally retarded. There was a marked improvement during the last half of the month. Insect damage was generally light.

Rice made normal progress during the month. Growth was rapid during the latter half. Some early fields were heading by mid-month. Much of the early crop was drained in order to let the field dry for the control of root maggots. Fertilizer was applied extensively during the last two weeks.

Except for some slight damage from excess moisture in lowlands and poorly drained fields early corn made excellent progress. Much of the early crop was in the "hard dough" or "roasting ear" stage by the close of the month. Considerable late corn was stunted by grass and excess soil moisture. Late fields also suffered considerable damage from bud worm.

Soybeans fared very similarly to cotton and corn. The early crop made very good progress while later fields were retarded by excess moisture and grass. Many abandoned cotton fields were given over to soybeans.

The month's weather was generally favorable for truck and fruit crops. Tomatoes were being harvested in the southeastern counties at the beginning of the month. The harvest continued, reaching the northwestern counties by the close of the month. At the beginning of the month early peaches were being harvested in volume. The harvest of Elberta peaches began about mid-month and continued through the close. The watermelon harvest began about the middle of the month and continued through the close.

The hay crops made excellent growth, with a considerable amount of good quality hay being cut. There was, however, some damage from frequent showers.

### STORMS

There were no severe storms in Arkansas during July 1951.

### FLOODS

Moderate to heavy showers beginning on June 29th, and continuing through July 3rd, with local storm totals amounting to more than 5.00 inches at several stations, were general over the White, Black and Ouachita River watersheds. This resulted in flooding on the Ouachita, Lower Black and Lower White Rivers. There was also slight flooding on the Arkansas River from Fort Smith to Ozark due to water from upstream. Flood damage on the Ouachita and White Rivers was slight. Damage on the Lower Black River in the vicinity of Black Rock was estimated at $43,000. There was no flood damage on the Arkansas River.

A flash flood on DeRoche Creek on July 3rd did extensive damage to the village of Lambert in Hot Spring County. Ten houses were washed from their foundations and were either overturned or extensively damaged. Monetary loss was estimated at $12,250.

Two persons were drowned in a flash flood on Harding Drain in the city of Pine Bluff on July 3rd.--JFR

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

See reference notes following Station Index

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
G Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 9-11-51 -- 1125

See reference notes following Station Index.

## ARKANSAS

AUGUST 1951
Volume LVI No. 8

KANSAS CITY: 1951

## ARKANSAS - AUGUST 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This was the warmest August over Arkansas since 1947. Despite continued high temperatures, the month's weather was generally favorable for agriculture.

The monthly mean temperature for the State was 81.5° which is 1.5° above the normal. The highest monthly mean temperature was 86.0° at Texarkana. The lowest monthly mean temperature was 76.0° at Turnpike. The highest temperature recorded was 109° at Arkadelphia on the 31st, and the lowest, 50° at Turnpike on the 24th. There was an average of 25 days on which the temperature rose to 90° or higher. Three stations--Camden, Magnolia, and Warren--had 90° or higher temperatures on every day during the month. At Turnpike, the temperature rose to 90° or above on only 5 days.

The monthly average precipitation for the State was 2.75 inches, which is 0.84 inch below the normal. The greatest monthly total was 9.35 inches at Sugar Loaf Mountain, and the least 0.18 inch at De Queen and Magnolia 5 miles north. The greatest amount of precipitation recorded on any one day was 4.17 inches at Beedeville on the 18th. There was an average of 5 days with 0.01 inch or more of precipitation during the month.

Cotton made good to excellent progress during the first half of the month, but the adverse effects of hot dry weather became apparent during the latter half. By midmonth early cotton was opening rapidly in the southern counties, with some open bolls reported as far north as Phillips County. At the same time late cotton was blooming and fruiting heavily. Some picking of early cotton began in the southern portion of the State early in the latter half of the month, and was getting under way generally over the State by the close. The month's weather was generally favorable for poisoning operations. As a result, insects were kept well under control where rigid poisoning schedules were maintained.

Early corn generally reached maturity near the middle of the month. Exceptionally good yields were indicated. Late corn suffered considerably from sustained heat and lack of moisture. The bud worm infestation in late corn was the worst in several years during the first half of the month but subsided considerably during the latter half. Pop corn was ready for harvest by mid-month in Crawford County.

Rice made good to excellent progress throughout the month. Some early varieties were heading at the beginning of the month. A limited harvest began in the southern counties during the third week and progress to most areas by the close.

Soybeans made excellent progress during the month. Except in dry areas in the southern portion of the State. Grain sorghums did well in all but the drier sections of the State. At the close of the month the entire crop gave promise of good yields.

The month's weather was almost ideal for hay crops. An exceptional amount of good quality hay was saved despite a reduction in yield due to hot dry weather.

The watermelon harvest in the Hope area continued through the first three weeks of the month. Late harvested melons were small but of excellent quality. Tomato harvest and canning reached a peak at the middle of the month. The Concord grape harvest began during the third week and continued through the close of the month. The harvest of Elberta peaches was completed early in the month, except in the northwestern portion of the State, where it continued into the second week.

### STORMS

There were no severe storms in Arkansas during August 1951.

### FLOODS

The only river gage in Arkansas registering flood stage during the month of August 1951 was on the White River at Clarendon on the 1st and 2nd. This high water was a carry over from the previous July. No flood damage was reported.--JFR

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| 6 | Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# CLIMATOLOGICAL DATA

## ARKANSAS

SEPTEMBER 1951
Volume LVI No. 9

NOTE: Beginning with the October 1951 issue of Climatological Data, Table 4, Hourly Precipitation, will be discontinued due to curtailment of the funds necessary for processing and publication of these data.

KANSAS CITY: 1951

## ARKANSAS - SEPTEMBER 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

September 1951 brought relief from the extended period of high temperatures and dry weather that had prevailed over Arkansas during the summer. In general, the month's weather was favorable for maturing late crops, the early fall harvest, and for planting winter crops.

The monthly mean temperature for the State was 71.9° which is 2.2° below the normal. The highest monthly mean was 77.3° at Magnolia, and the lowest 65.5° at Mammoth Spring. The highest temperature recorded was 108° at Arkadelphia on the 1st and at Perryville on the 2nd. Temperatures of 100° or higher were common over the State on the opening days. The lowest temperature recorded was 37° at Paragould on the 29th. There was an average of 8 days with temperatures of 90° or higher over the State.

The average monthly precipitation for the State was 4.61 inches, which is 1.29 inches above the normal. The greatest monthly total reported was 10.92 inches at Hopper and the least 1.19 inches at Hampton. The greatest amount recorded on any one day was 3.61 inches at Ozark on the 27th. There was an average of 8 days with 0.01 inch or more of precipitation during the month.

High temperatures and dry weather which prevailed during August continued into the opening days of September, except for scattered showers, causing a further deterioration of late crops in the northwestern, central and southern counties. Pastures were dry and stock water was running short. Generally moderate to locally heavy rains on the 8th and 9th, with heaviest amounts falling over the drier areas, did much to alleviate the adverse effects of the hot, dry weather.

At the beginning of the month cotton was opening rapidly with picking underway in all sections. Hot weather, however, caused many immature bolls to open. Shedding of squares and small bolls was prevalent in dry areas. After the first week, more frequent precipitation materially improved late cotton. Damp cool weather, however, hampered picking of earlier varieties and delayed the opening of bolls in the northeastern counties. There were reports of a lowering of quality as a result of excessive moisture. At the close of the month cotton was in need of a period of warm, dry weather. The use of chemical defoliants was begun near the middle of the month in scattered localities and became more general by the close. The harvest of early corn began in late August and continued through the month of September. The crop made excellent yields. Late corn, however, was seriously damaged by the dry weather of August and the first week of September. While ample moisture during the last three weeks of September helped some fields, the general condition of the crop was very poor.

As the month opened, rice was heading rapidly and the combining of early varieties had begun in most sections. The harvest continued through the month with excellent yields in most localities. There were a few reports of heavy rice in Arkansas and Cross Counties being beaten down by wind and rain with a resultant reduction in yield.

Early soybeans matured rapidly during the first half of the month with a limited harvest beginning near the middle of the month. Good yields were reported except in the southern half of the State where the crop had been damaged by hot dry weather. Late soybeans were seriously retarded by hot dry weather but showed a marked improvement during the latter half of the month.

Cutting grain sorghums for silage generally began early in the month. The grain harvest began in most sections near the middle of the month. The crop benefited from the rains of the last three weeks.

Harvest of Jonathan Apples and Concord Grapes was completed early in the month. The fruit was of good quality but size and yield were somewhat reduced by dry weather.

At the close of the month a large acreage of full grains, winter cover crops and pastures had been seeded. Early sown oats were up to good stands.

Considerable good quality hay was cut during the month. There were some reports of damage due to wet weather, but in general, most of the crop was saved.

At the beginning of the month, pastures were dry and burned, but they revived rapidly with the advent of cool wet weather after the first week. As a result of improved pastures and increased stock water, cattle showed a steady gain during the month.

### STORMS

One man was killed by lightning and several barns unroofed and small buildings damaged by wind during a storm that struck Hooper in Montgomery County at 4:00 a.m. on September 27. No estimate of monetary damage from this storm is available.

A windstorm that struck Glenwood at 4:15 a.m. on September 27th unroofed houses and barns, blew out windows, and blew over trees in the town. Cotton and corn standing in the fields were damaged. Monetary damage was estimated at $5,000 of which $2,000 was to crops and $3,000 to other property.

### FLOODS

There were no floods in Arkansas during September 1951.--JFR

ACKNOWLEDGMENTS

In addition to the climatological data from some 4,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# CLIMATOLOGICAL DATA

## ARKANSAS

OCTOBER 1951
Volume LVI No. 10

NOTE: Beginning with the October 1951 issue of Climatological Data, Table 4, Hourly Precipitation, will be discontinued due to curtailment of the funds necessary for processing and publication of these data.

KANSAS CITY: 1951

## ARKANSAS - OCTOBER 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather over Arkansas during October 1951 was very favorable for seasonal agricultural activities. Late crops matured rapidly, and the harvest of mature crops progressed at a rapid rate.

The monthly mean temperature for the State was 63.1° which is 0.2° above the normal. The highest monthly mean temperature was 66.6° at Warren and the lowest 58.5° at Mammoth Spring. The highest temperature recorded was 98° at Newport on the 7th, and the lowest 30° at Mammoth Spring and Paragould on the 20th. Near record high temperatures were recorded in most sections during the opening week.

The average monthly total precipitation for the State was 4.55 inches which is 1.32 inches above the normal. The greatest station total was 12.05 inches at the Fort Smith Airport. The smallest total was 0.43 inches at Arkansas City. The greatest precipitation recorded on any one day was 5.40 inches at Camp Chaffee on the 27th. There was an average of 7 days on which 0.01 inch or more of precipitation was recorded. The only hail recorded during the month was a trace at Grannis on the 22nd.

The first three weeks of the month were nearly ideal for maturing and harvesting late crops. General moderate to locally heavy rainfall during the last ten days was beneficial to fall-sown grains, legumes, and pastures.

Dry, warm weather helped to mature cotton and permitted picking to progress at a rapid rate. By the close of the third week about 80% of the crop had been picked in the southern part of the State and from 60% to 65% in the northeast portion. While quite general rains during the last week slowed picking in many sections, workers generally averaged four days.

Rice harvest progressed rapidly during the month. By the close, the harvest was nearing completion in most localities. About the only rice remaining to be harvested at the close of the month was some late fields and the usual small patches and parts of fields.

The combining of soybeans made good progress during the month, and by the close was about 65% completed over the State.

At the close of the month much of the grain sorghum crop remained immature despite favorable weather. Good yields were reported from the fields that had been combined.

The State's corn crop had been more than 60% harvested by the close of the month, but had been delayed in main cotton producing areas. Yields were about as expected except for some reduction in late varieties due to dry weather.

Pastures deteriorated during the dry weather of the first three weeks, but made a rapid recovery during the last week. Cattle did fairly well during the month. However, some loss of flesh was reported as a result of reduced pasturage.

The harvest of miscellaneous crops made generally good to excellent progress during the month.

### STORMS

At 3:00 a.m. on October 23, 1951, a small tornado completely destroyed the Clem Orrell home two miles east of Steve in Yell County. Four persons in the house were injured, two of them seriously. There is no evidence of the storm having struck anywhere else in the vicinity. Houses and outbuildings located within 100 yards of the Orrell home were not damaged. No estimate of the monetary loss is available.

### FLOODS

There were no floods in Arkansas during October 1951.--JFR

"Stations not followed by a Table Number in the Station Index are not published in Climatological Data beginning with October 1951."

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- \- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
- R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- SS This entry in time of observation column in Station Index means observation made near sunset.

ubscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders hould be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent f Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 12-17-51 -- 1110

## ARKANSAS

NOVEMBER 1951
Volume LVI No. 11

KANSAS CITY: 1952

## ARKANSAS - NOVEMBER 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This was the coldest November in Arkansas since statewide records were begun in 1891. In many localities record low temperatures for so early in the season were recorded on the 3rd. Over much of the northern portion of the State snow occurred before a killing frost.

The monthly mean temperature for the State was 45.0° which is 6.2° below the normal. The highest monthly mean temperature was 50.3° at Magnolia 3 N. The lowest monthly mean temperature was 39.2° at Gravette. The highest temperature, 89°, occurred at Malvern on the 13th and the lowest, 9°, occurred at Harrison on the 19th. There was an average of 14 days on which temperatures of 32° or lower were recorded. A killing frost occurred over most of the State on the morning of the 3rd.

The average monthly precipitation for the State was 5.13 inches which is 1.33 inches above the normal. The greatest monthly total was 10.49 inches at Saint Francis and the least 1.78 inches at Cummins Farm. The greatest daily amount recorded was 3.38 inches at Marshall on the 25th. Precipitation was well distributed over the month with an average of 10 days on which 0.01 inch or more was recorded.

Snow, together with some sleet and freezing rain occurred over much of the northern portion of the State during the opening days of the month. The ground in many northern counties remained covered until about the 9th. Precipitation during the remainder of the month was principally in the form of frequent moderate to locally heavy rainfall.

Considerable harvesting remained to be done at the beginning of November. Precipitation interfered with farm work during most of the month. Cotton was picked and corn gathered as weather permitted. The work was done mostly during rather brief periods of favorable weather however. For the most part ground remained too wet for plowing and disking during the entire month. As a result, little was accomplished toward the preparation of seed beds for late fall and early spring planting.

Low temperatures during the opening days and during the third week damaged late corn, sweet potatoes, oats and truck crops. Strawberry plants were not damaged.

As a result of generally unfavorable weather, the month's farm activity was mostly limited to fencing, wood cutting, clearing, butchering and other late fall and winter chores.

### STORMS

There were no severe storms in Arkansas during November 1951.

### FLOODS

A period of moderate to heavy rainfall over the Black and middle lower White River watersheds on November 22, 23 and 24 gave storm totals averaging 3.07 inches. This caused slight flooding at Augusta and Georgetown on the White River; Black Rock on the Black River and Judsonia on the Little Red River. Damage from this flooding was negligible.--JRF

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

DECEMBER 1951
Volume LVI No. 12

KANSAS CITY: 1952

## ARKANSAS - DECEMBER 1951

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The weather during December 1951 over Arkansas was mostly warm with frequent light to occasionally moderate precipitation.

The mean temperature for the State was 43.9°, which is 1.1° above the normal. The highest mean temperature was 51.7 at Magnolia 3 N and the lowest 38.1° at Mammoth Spring. The highest temperature recorded was 84° at Camp Chaffee on the 31st, and the lowest, -1° at Bentonville on the 16th. There was an average of 17 days during the month on which the temperature dropped to 32° or lower.

The average precipitation for the State was 3.76 inches, which is .43 inch below the normal. The greatest total was 8.60 inches at Helena and the least, 0.50 inch at Rogers. The greatest daily total was 4.20 inches at Magnolia 3 N on the 8th. The greatest monthly snowfall was 0.6 inch at Fayetteville. The only other measurable snowfall reported during the month was 0.1 inch at White Rock. Several stations reported falls too light to measure, but most stations reported no snow.

Frequent rains and the resultant wet ground seriously hampered all forms of outdoor work. The soil remained too wet for plowing and breaking during most of the month.

At the opening of the month considerable cotton remained to be picked. Because of unfavorable weather conditions, only a small amount was picked until the closing week.

Aside from cotton picking and plowing, agricultural activity during the month was limited to digging potatoes, gathering corn, harvesting late rice and soybeans, and the usual late fall chores. While some cotton remained to be picked and corn to be gathered at the close of the month, the harvest of most other crops had generally been completed by mid-month.

Early sown grains and cover crops made excellent progress during the month. Strawberry beds showed good promise at the close. Pastures continued to afford some grazing throughout the month. As a result, livestock remained in fair to good condition throughout the month.

### STORMS

No severe storms occurred in Arkansas during December 1951.

### FLOODS

Flooding in Arkansas during December 1951 was confined to the Lower Black and Lower White Rivers. These overflows were due to heavy rainfall occurring over the watersheds during the latter half of the preceding November. Damage was negligible.--JFR

## CORRECTIONS

April 1951, Alicia, Table 4, delete dashes on 30th. On 11th add: 2a .10, 3a .13, 4a .15, 5a .05, 6a .02, 7a .04, 8a .01, total .50. On 21st add: 10a .29, 11a .02, noon .04, 1p .75, 2p .13, 4p .01, 5p .01, total 1.25. On 26th add: 6a .10, total .10.

May 1951, Wynne, Table 2, temperature departure from normal should be 0.2.

June,1951, Bull Shoals Dam, Table 3, delete dashes on 11th through 18th and add: 12th .20, 14th .28, 16th .32, 18th .09, total 6.49.

Bull Shoals Dam, Table 4, delete dashes on 11th. Add amounts as follows: on 12th, 8p .20 and total .20; on 14th, 4p .11, 5p .10, 6p .03, 7p .02, 8p .01, 10p .01, total .28; on 16th, 2P .08. 3p .12, 4p .05, 5p .05, 6p .02, total .32. On 18th delete dashes and add total of .09.

Monticello, Table 3, delete dash on 30th and add .39.

W.R.P.C., Kansas City, Mo. -- 2-15-52 -- 1110

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- \- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
- R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# ARKANSAS - 1951

Walter C. Hickmon, Section Director - Little Rock

## WEATHER SUMMARY

The weather over Arkansas during the year 1951 was generally favorable for agriculture.

The mean annual temperature for the State was 60.5°, which is 0.9° below the normal. The highest annual mean temperature was 65.3° at Magnolia 3 N and the lowest 56.1° at Turnpike. The highest temperature recorded during the year was 109° at Arkadelphia on August 31st. The lowest temperature recorded during the year was 24° below zero at Mammoth Spring on February 2nd.

Precipitation was well distributed throughout the year except for dry periods during the last three weeks of May, the latter half of August and the first week of September. The average annual precipitation for the State was 52.97 inches, which is 4.34 inches above the normal. Annual totals at individual stations ranged from 40.15 inches at Gravelly to 70.18 inches at Beaty Lake. The greatest monthly average over the State was 6.93 inches in June and the least 1.93 inches in May. The greatest daily precipitation amount recorded was 7.18 inches at Okay on July 1st.

## SYNOPSIS BY MONTHS

JANUARY: The weather during January 1951 was generally favorable for outdoor work and the growth of winter crops. The monthly mean temperature for the State was 41.5°, which is 0.3° above the normal. The highest temperature recorded during the month was 80° five miles north of Magnolia on the 18th and the lowest, 2° at White Rock on the 31st. The average monthly precipitation for the State was 5.43 inches, which is 0.99 inch above the normal. The greatest monthly total was 12.96 inches at Marvell and the least 1.08 inches at Harrison. The greatest daily amount was 3.70 inches at Sheridan. The average monthly snowfall was 2.5 inches. The greatest monthly snowfall was 7.5 inches at Dumas. A general glaze and sleet storm began on the afternoon of the 28th and continued intermittently through the 31st. Highway traffic was disrupted over much of the State and many schools were closed. General moderate to heavy rains on the 11th, 12th and 13th caused minor flooding on the Ouachita, Little Missouri, Little Red and the Lower Black and Lower White Rivers. Flood damage was negligible.

FEBRUARY: A severe cold wave on the opening days of the month gave Arkansas near-record low temperatures. In many sections temperatures were the lowest in any February since 1905, and the lowest in any month since January 1930. Despite low temperatures, the first week's mean temperature was above normal. The monthly mean temperature was 44.3°, which is 0.6° above the normal. Monthly mean temperatures ranged from 36.8° at Green Mountain to 50.2° at Magnolia. The lowest temperature recorded was 24° below zero at Mammoth Spring on the 2nd. This is the lowest temperature recorded in the State since Lead Hill had 28° below zero on January 22, 1930, and the lowest February temperature since the State's record low temperature of -29° occurred at Gravette on February 13, 1905. The cold severely damaged fruit trees and shrubs. Precipitation was well distributed during the month. The average precipitation for the State was 5.32 inches, which is 1.73 inches below the normal. Monthly totals at individual stations ranged from 1.23 inches at Fountain Hill to 11.59 inches at White Rock. The greatest daily amount recorded was 4.30 inches at Blakely Mountain Dam on the 20th. The average monthly snowfall was 2.5 inches. The greatest monthly snowfall was 9.9 inches at Rogers. Farm work and crops made poor progress during the first half of the month, but conditions improved rapidly the latter half. General moderate to heavy rains beginning on the 13th and continuing intermittently through the 20th caused floods on the Black, White and Ouachita Rivers and high stages on the Arkansas River. Flood damage was extensive on the Lower Black River and the White River between Newport and Georgetown. It was moderate on the Upper Ouachita River.

MARCH: Cool, dry weather prevailed over Arkansas during the month. The monthly mean temperature for the State was 51.3°, which is 1.1° below the normal. The highest monthly mean was 57.7° at Crossett and Magnolia and the lowest, 41.9°, at Green Mountain. The highest temperature recorded was 87° at Perryville on the 6th, and at Magnolia on the 8th. The lowest temperature recorded was 11° at Harrison on the 13th. The average monthly precipitation for the State was 2.40 inches, which is 2.36 inches below the normal, making this the driest March since 1941. The greatest monthly total was 7.21 inches at Crossett, and the least 0.67 inch at Black Rock. The greatest daily amount recorded was 3.77 inches at Mena on the 10th. Except for a period of cold, wet weather during the middle of the month, the weather during March was very favorable for farm work and crop growth. During the afternoon and early evening of the 17th, a series of storms occurred from Texarkana northeastward to Batesville. Principal damage was from lightning in El Dorado, hail in Clarksville, and wind in Batesville. At 7:00 a.m. of the 28th, lightning did $1,000,000 damage when it struck the main switchboard on the power plant of the Crossett Paper Mills at Crossett. Floods during the month were the result of continued high stages from the floods of the preceding February except for secondary rises on the Black River at Black Rock and the White River at Augusta. Flood damage was negligible.

APRIL: Cool and relatively dry weather prevailed over Arkansas during the month. This was the coolest April in Arkansas since 1928 and the fourth coolest April on the State's 61-year record. The monthly mean temperature for the State was 58.1°, which is 3.5° below the normal. The highest monthly mean temperature was 62.8° at Magnolia and the lowest, 51.1° at Green Mountain. The highest temperature recorded was 90° at Paris on the 27th and at Camden on the 28th. The lowest was 21° at Harrison on the 17th. The monthly average precipitation over the State was 4.33 inches, which is 0.61 inch below the normal. The greatest monthly total was 8.32 inches at Prescott and the least 1.80 inches at Cummins Farm. The greatest daily precipitation recorded was 3.72 inches at the Prescott Soil Conservation Service Station on the 6th. The only measurable snowfall reported was 1.5 inches at Lurton and 1.0 inch at Buffalo Tower, while 29 stations reported snowfall too light to measure. Cool wet weather during the first half of the month was unfavorable for farm work and crop growth. As a result, the planting of cotton and rice was delayed and crops already planted made poor or little progress. There was a marked improvement during the latter half of the month. During the afternoon of the 6th, a series of hail and wind storms occurred in a narrow belt from Russellville southeastward into Lonoke County. Property damage was estimated at $250,000 and damage to crops at $100,000. On the evening of the 18th, a hail and wind storm did extensive damage to the peach crop in the Center Point area of Howard County, and destroyed a hangar and two airplanes near Nashville. No estimate of the monetary loss is available. At 2:00 p.m. of the afternoon of the 21st a hailstorm covered a path 200 yards wide from a point four miles west to a point ten miles northeast of Blytheville. Damage was estimated at $20,000 with no crop damage reported. Floods during the month were the result of secondary rises and continued high water from the previous month.

MAY: This was the driest May in Arkansas since 1925, and the third driest on the State's 61-year record. The average monthly precipitation was 1.93 inches, which is 3.18 inches below the normal. Every station reported below normal rainfall with individual totals ranging from 0.12 inch at Monticello to 4.31 inches at Gilbert. The monthly mean temperature for the State was 69.1° which is exactly normal. The highest mean temperature was 72.8° at Pine Bluff and the lowest 63.7° at Harrison. The highest temperature reported was 101° at Dumas No. 1 and Subiaco on the 31st, which is the highest temperature recorded during any May since 1934. The lowest temperature recorded was 33° at the Batesville Livestock Station on the 12th. Quite general rains occurring during the first 10 days of the month further delayed the planting of cotton and corn, but were favorable for small grains, hay and pastures. After the first 10 days, rapid progress was made with field work and planting. By the close of the month, cotton planting was complete in all sections, and rice seeding nearly complete. On the 22nd, hailstorms were reported near McRae in White County and at Augusta in Woodruff County. The only flood during the month was from secondary crests on the White River at Clarendon and below.

JUNE: The weather over Arkansas during June 1952 was showery and rather cool. The average monthly precipitation was 6.93 inches which is 2.82 inches above the normal. Monthly totals at individual stations ranged from 2.12 inches at Marvell to 14.27 inches at Rogers. The greatest

daily precipitation was 4.29 inches at Crossett on the 12th. The monthly mean temperature for the State was 75.9° which is 1.2° below the normal. The highest monthly mean was 79.7° at Dumas No. 1 and the lowest 66.9° at Turnpike. The highest temperature recorded was 103° at Blytheville on the 1st and the lowest 49° at Harrison on the 4th and Gravette on the 6th. Cotton generally grew well during the month. Blooms appeared in fields in the southern portion by the middle of the month, and by the close early cotton was fruiting rapidly. Rice made excellent progress during the entire month. Corn made good progress. On the morning of the 7th a wind, rain and hail storm moved across Lonoke and Arkansas Counties doing extensive damage. During the early morning of the 8th a wind and electrical storm struck near Clarksville in Johnson County and followed a path five miles wide and twenty miles long moving from west to east. Damage was extensive. At 4:00 a.m. of the same morning, a wind and hail storm moved from northwest to southeast across Arkansas County, doing extensive damage to communication and power lines. At 1:00 a.m. of the 9th another wind, hail and electrical storm moved from northwest to southeast across Lonoke and Arkansas Counties, doing further damage to telephone and power lines. There were no floods during the month.

JULY: The weather during the month was generally favorable for agriculture. The monthly mean temperature for the State was 80.5°, which is exactly normal. The highest monthly mean was 83.4° at Helena and the lowest 75.3° at Turnpike. The highest temperature recorded was 104° at Monticello on the 10th and the lowest 51° at Harrison on the 1st and at the Batesville Livestock Experiment Station on the 2nd. The average monthly precipitation for the State was 5.83 inches, which is 2.09 inches above the normal. The greatest monthly total was 11.76 inches at Newhope and the lowest, 0.74 inches, at Berryville. The greatest daily amount was 7.18 inches at Okay on the 1st. The cotton crop made good progress in all sections, except that many fields of late cotton became rank. Rice made rapid growth during the latter half. Early corn made excellent progress and much of it was in the "roasting ear" stage by the close. There were no severe storms during the month. Heavy showers on the closing days of June and the first few days of July resulted in flooding on the Ouachita, Lower White and Lower Black Rivers. There was also slight flooding on the Arkansas River from Fort Smith and Ozark due to water from upstream. A flash flood on DeRoche Creek on July 3rd did extensive damage to the village of Lambert in Hot Spring County. Two persons were drowned in a flash flood on Harding Drain in the City of Pine Bluff on the 3rd.

AUGUST: This was the warmest August over Arkansas since 1947. Despite continued high temperatures, the month was favorable for most crops. The monthly mean temperature was 81.5°, which is 1.5° above the normal. Monthly mean temperatures ranged from 76.0° at Turnpike to 86.0° at Texarkana. The highest temperature recorded was 109° at Arkadelphia on the 31st and the lowest 50° at Turnpike on the 24th. Three stations--Camden, Magnolia, and Warren--recorded temperatures of 90° or higher on every day during the month. The average precipitation was 3.75 inches, which is 0.84 inch below normal. Monthly totals ranged from 0.18 inch at DeQueen and 5 miles north of Magnolia to 9.35 inches at Sugar Loaf Mountain. Cotton and corn made excellent progress during the first half of the month, but the adverse effects of continued warm weather became apparent during the latter half. Dry weather was, however, favorable for insect control. Rice made excellent progress during the entire month. There were no severe storms reported. The only flooding was on the White River at Clarendon the 1st and 2nd, which was a carry-over from high water of July.

SEPTEMBER: The month brought relief from the extended period of high temperatures and dry weather that had prevailed during the summer. The monthly mean temperature was 71.9°, which is 2.2° below the normal. Monthly means ranged from 65.5° at Mammoth Spring to 77.3° at Magnolia. The highest temperature reported was 108° at Arkadelphia on the 1st and at Perryville on the 2nd. Temperatures of 100° or higher were common on the opening days. The lowest temperature recorded was 37° at Paragould on the 29th. The average monthly precipitation was 4.61 inches, which is 1.29 inches above the normal. The greatest monthly total reported was 10.92 at Hopper and the least 1.19 inches at Hampton. The greatest daily amount recorded was 3.61 inches on the 27th. General moderate to locally heavy rains on the 8th and 9th did much to alleviate the adverse effects of the hot dry weather of the previous months. The month was generally favorable for early fall harvest. A windstorm struck Hooper in Montgomery County at 4:00 a.m. of the 27th. One man was killed by lightning during the storm. Another storm struck Glenwood at 4:15 a.m. of the same day, causing considerable property damage. There were no floods during the month.

OCTOBER: This was a very favorable month for agriculture in Arkansas. Late crops matured rapidly and the harvest of mature crops progressed at a rapid rate. The monthly mean temperature for the State was 63.1°, which is 0.2° above the normal. The highest monthly mean temperature was 66.6° at Warren and the lowest 58.6° at Mammoth Spring. The highest temperature recorded was 98° at Newport on the 7th and the lowest 30° at Mammoth Spring and Paragould on the 20th. The average monthly precipitation for the State was 4.55 inches which is 1.32 inches above the normal. The greatest monthly total was 12.05 inches at the Fort Smith Airport and the smallest 0.43 inches at Arkansas City. The greatest daily precipitation was 5.40 inches at Camp Chaffee on the 27th. Cotton picking progressed rapidly. By the close of the third week about 80% of the cotton crop had been picked over the southern part of the State and 60% to 65% over the northern part. The rice harvest progressed rapidly during the month and by the close was nearing completion in most sections. The harvest of other crops progressed equally well, for the most part. At 3:00 a.m. of the 23rd a small tornado completely destroyed a home two miles east of Steve in Yell County. There is no evidence of the storm having struck anywhere else. Houses and outbuildings located within 100 yards of the house were undamaged. Four persons in the house were injured, two of them seriously. There were no floods during the month.

NOVEMBER: This was the coldest November in Arkansas since statewide records were begun in 1891. Record low temperatures for so early in the season were recorded on the morning of the 3rd. Over much of the northern portion of the State, snow occurred before a killing frost. The monthly mean temperature for the State was 45.0°, which is 6.2° below the normal. Monthly mean temperatures ranged from 39.2° at Gravette to 50.3° at Magnolia 3 N. The highest temperature recorded was 89° at Malvern on the 14th and the lowest 9° at Harrison on the 19th. A killing frost was reported over much of the State on the morning of the 3rd. The average precipitation for the State was 5.13 inches, which is 1.33 inches above the normal. Monthly totals ranged from 1.78 inches at Cummins Farm to 10.49 inches at Saint Francis. The greatest daily amount was 3.38 inches at Marshall on the 25th. Snow, together with some sleet and freezing rain, fell over much of the northern portion of the State on the opening days of the month. The ground in many northern counties remained covered until about the 9th. During the remainder of the month precipitation was principally in the form of rain. On the whole, the month was unfavorable for agriculture. There were no severe storms. A period of moderate to heavy rainfall on the 22nd, 23rd and 24th caused slight flooding on the White River at Augusta and Georgetown, on the Black River at Black Rock and on the Little Red River at Judsonia.

DECEMBER: The month was warm with frequent light to occasionally moderate precipitation. The monthly mean temperature was 43.9°, which is 1.1° above the normal. The highest monthly mean was 51.7° at Magnolia 3 N, and the lowest 38.1° at Mammoth Spring. The highest temperature recorded was 84° at Camp Chaffee on the 31st and the lowest, -1° at Bentonville on the 16th. The State's average precipitation for the month was 3.76 inches, which is 0.43 inch below the normal. Monthly totals ranged from 0.50 inch at Rogers to 8.60 inches at Helena. The greatest daily amount reported was 4.20 inches at Magnolia 3 N on the 8th. Frequent precipitation and wet ground seriously interfered with outdoor work. The soil remained too wet for plowing and breaking during most of the month. Only a small amount of cotton was picked during the month. There were no severe storms. Flooding was limited to the Lower White and Lower Black Rivers and was due to rainfall during the latter half of the preceding month.--JFR

## RELOCATIONS OR CHANGES IN EXPOSURE OF INSTRUMENTS

Bentonville: Equipment moved 1 block north of old site on December 10.

Big Flat: Rain gage moved 75 feet west of old site on June 26.

Big Fork: Rain gage moved 10 feet west of old site on February 13.

Black Rock: Rain gage moved 1500 feet west of old site on September 5.

Calico Rock: Rain gage moved 800 feet south of old site on August 15.

Durham: Rain gage moved 50 feet northeast of old site on March 30.

Evening Shade: Rain gage moved 1/4 mile east of old site on March 28.

Glenwood: Rain gage moved 1/2 mile south of old site on October 6.

Hampton: Rain gage moved 1 mile west of old site on May 17.

Hector: Rain gage moved 1800 feet north of old site on October 1.

Magnolia 3 N: Equipment moved 1.5 miles north of old site on October 25.

Maxwell: Rain gage moved 95 feet southeast of old site on May 25.

Montrose: Rain gage moved 1/2 mile north of old site on May 15.

Morrilton 2 SSW: Equipment moved 1 mile south-southwest of old site on October 1.

Mount Ida #2: Rain gage moved 0.5 mile northeast of old site on February 13.

Perryville: Equipment moved 0.5 mile south of old site on January 1.

Searcy: Equipment moved 1 mile east-southeast of old site on March 19.

Star City 2 S: Rain gage moved 2 miles south of old site on March 12.

Sugar Loaf Mountain: Rain gage moved 25 feet south of old site on June 1.

West Fork: Rain gage moved 80 feet south of old site on August 1.

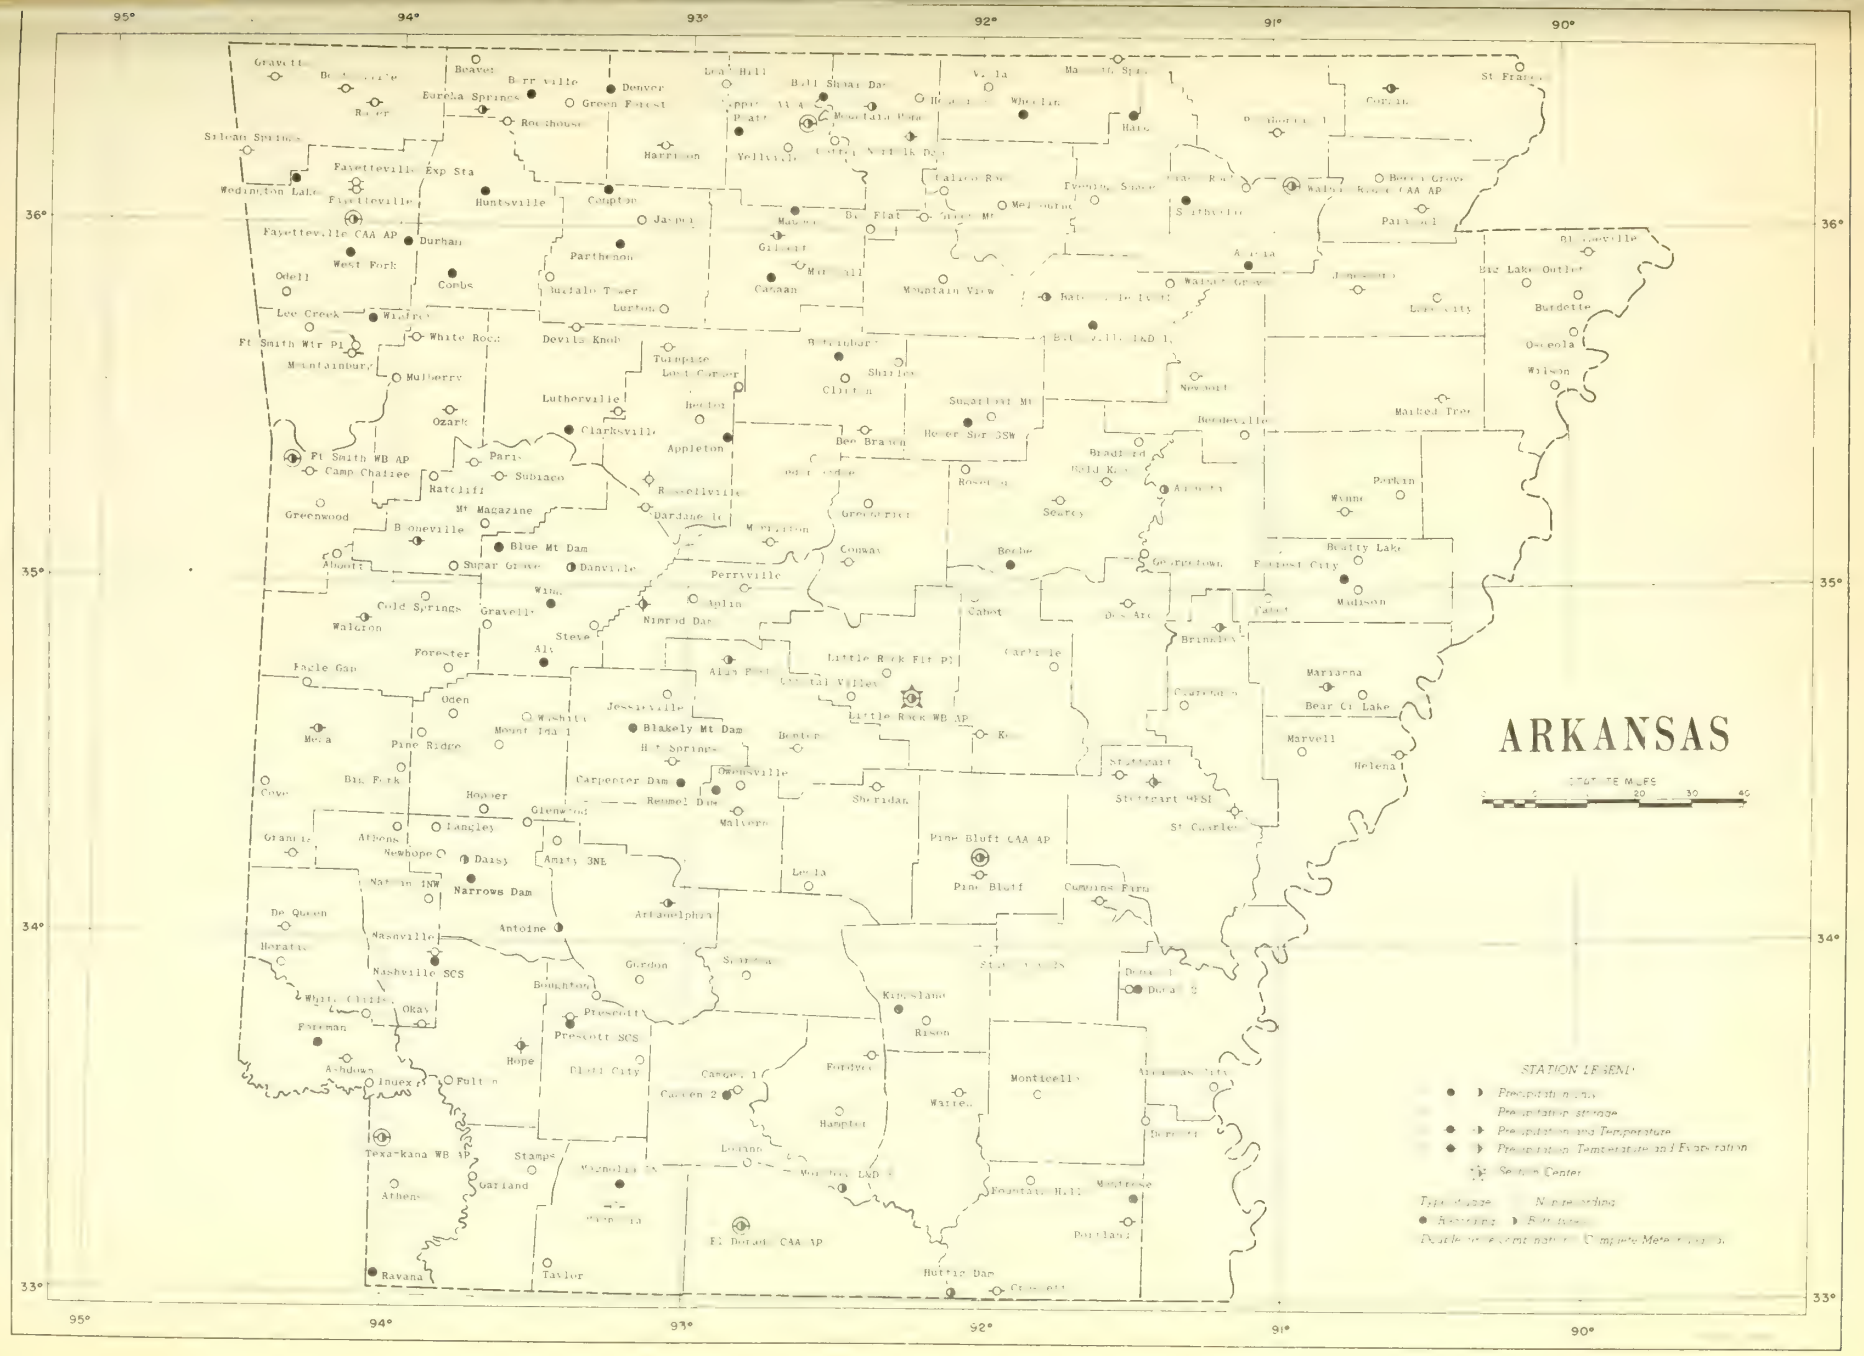
Winfrey: Rain gage moved 275 feet northeast of old site on March 30.

Wynne: Equipment moved 35 feet northwest of old site on May 26.

## REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.



Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- E Water equivalent of snowfall wholly or partially estimated, using a ratio of 1 inch of water equivalent to every 10 inches of new snowfall.
- M 1 to 9 days' record missing; see monthly Climatological Data for detailed daily record.
- R Station equipped with a recording gage only.
- T Trace, an amount too small to measure.
- V Includes total for previous month.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

JANUARY 1952
Volume LVII No. 1

KANSAS CITY: 1952

## ARKANSAS - JANUARY 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This was the fifth warmest January in Arkansas since statewide records were begun in 1891. The monthly mean temperature for the State was 47.3° which is 6.1° above the normal. This value was exceeded only by 49.2° in 1907, 47.6° in 1911, 48.6° in 1923 and 48.8° in 1933. The highest monthly mean temperature was 53.7° at Okay and the lowest 41.4° at Bentonville. The highest temperature recorded was 82° at Ashdown, Morrilton 2 SSW, Prescott and Saint Charles on the 1st, and at Booneville, Camp Chaffee, Paris and Waldron on the 19th. Record high temperatures were recorded in most sections of the State on the 1st. The lowest temperature recorded was 10° at Bentonville, Harrison and Mount Magazine on the 23rd. There was an average of 13 days on which temperatures of 32° or lower were recorded.

The average precipitation for the State was 3.86 inches which is 0.58 inch below the normal. The greatest total was 7.15 inches at the Walnut Ridge CAA Station and the least, 1.05 inches, at Abbott. The greatest daily total was 4.27 inches at Helena on the 27th. The average monthly snowfall was only a trace. The greatest monthly snowfall was 1.3 inches at Bentonville with 70 stations reporting no snow during the month. Freezing rain and sleet was widespread over the northern portion of the State on the 2nd, 3rd and 4th. The heaviest precipitation was generally during this period.

Very little farm work was accomplished during the first half of the month, except for picking remnant cotton, cutting stalks and similar winter tasks. While wet ground generally brought the preparation of seed beds to a standstill, moist soil and warm weather were very favorable for winter grains, cover crops, pastures, and strawberry plants.

Unseasonably warm weather and light rainfall during the last half of the month were very favorable for all outdoor work. Plowing and the preparation of seedbeds progressed at a rapid rate. Winter crops made fine growth. Meadows greened and vegetation started.

Buds were reported to be swelling as early as the middle of the month. By the close, there was considerable apprehension for the safety of fruit. It was the consensus that continued high temperatures would expose fruit in most sections to serious damage from later frost or freezing.

### STORMS

An extensive storm of freezing rain and sleet covered much of Northern Arkansas on January 2nd, 3rd and 4th. There was an estimated $100,000 damage to rural electric co-op power lines and $77,000 to telephone lines. Other damage was mostly to timber, shade trees, shrubs, etc. Because of warm ground, ice did not accumulate on highways and roads. Traffic was not hampered.

At 3:30 p.m. of the 26th, a small tornado struck in the vicinity of Almyra and Stuttgart in Arkansas County. A second small tornado struck the same area about 30 minutes later. There was considerable damage to outbuildings, power and telephone lines, television antennas, roofs and boats. Hail caused some damage to windows and car windshields. Heavy rain damaged interiors of buildings suffering roof damage. Property damage is estimated at $10,000. There was little or no crop damage. The path of the storms was from southwest to northeast. The width or length of the path could not be determined.

### FLOODS

General rains on the first 4 days of January 1952 gave storm totals of between 3 and 5 inches over the watersheds of the Ouachita, White and Black Rivers. These rains caused slight rises on streams that were already at high stages, resulting in flooding on the Ouachita River, the Lower Black River and the White River from Augusta to its mouth. Since there was little agricultural activity and the streams had previously been at high stages, damage from this flooding was negligible.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

| | |
|---|---|
| - | No record in Tables 3. 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

KANSAS CITY: 1952

## ARKANSAS - FEBRUARY 1952

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Warm sunny weather prevailed over Arkansas during February 1952, making the month nearly ideal for all forms of outdoor activity.

The monthly mean temperature was 48.4° which is 4.7° above the normal, making this the warmest February since 1938. The highest monthly mean temperature was 53.6° at Warren and the lowest 43.0° at Bentonville. The highest temperature recorded was 84° at Crossett on the 29th. The lowest temperature recorded was 2° at Lead Hill on the 17th. Temperatures dropped to freezing or below on an average of 9 days over the State.

The average monthly precipitation for the State was 3.63 inches which is 0.04 inch above the normal. The greatest monthly total was 7.43 inches at Warren and the least 0.85 inch at Ratcliff. The greatest amount of precipitation recorded on any one day was 2.37 inches at Morobay on the 12th. The average monthly snowfall over the State was 2.9 inches. The greatest monthly total snowfall was 11.0 inches at Jasper. Several stations reported no snow during the month. The greatest depth of snow reported was 9 inches at Devils Knob on the 16th.

Warm open weather prevailing during the month permitted rapid progress with plowing and the preparation of seed beds. There were only brief periods during which the ground was too wet to be worked. Generally the soil continued in good condition throughout the month. Some spring oats, early corn and a few potatoes were planted during the latter half.

In general, vegetation maintained a steady advance during the month. Winter grains meadows and pastures made excellent progress. Pastures greened early in the month. Fruit buds were swelling by the end of the first week. By the close of the month peaches were showing pink and plums and cherries were in full bloom. A few strawberry blooms were reported shortly after the middle of the month.

Truck crops and early gardens made excellent growth. The only harvest in progress during the month was cutting of the mustard and spinach crop in the Van Buren area. This harvest began near the middle and continued through the close of the month.

Livestock continued in good condition during the entire month. This was due to both mild weather and excellent pastures.

### STORMS

At 4:30 p.m. of February 13, 1952, a small tornado demolished the Raymond Hicks home in the Buckeye Community of Mississippi County 8 miles north of Manila, Arkansas. The storm also tore the roof from another house and scattered several outbuildings. Five members of the Hicks family were injured, two of them seriously. The path of the storm was narrow and short, extending from southwest to northeast. The funnel cloud was observed from Manila. No estimate of the monetary loss is available.

### FLOODS

Flooding on the streams in the Little Rock District during the month of February 1952 was confined to the Lower White and the Lower Black Rivers. The White River at Saint Charles was above flood stage on the 1st and 2nd, from high water of January. General moderate rains on the watershed of the Black River on the first three days, with storm totals averaging near two inches, caused stages above flood stage at Black Rock from the 4th to the 8th, cresting at 14.5 feet at 6:00 p.m. of the 5th. Damage was negligible. Both stations had higher stages during the previous month.
